UNIVERSAL ELECTRONIC INFORMATION NETWORK AUTHENTICATION SYSTEM AND METHOD

Patent Assignee: HAN MENGYI (CN)
Author (Inventor): MENGYI HAN (CN)
Number of Patents: 000
Patent Family:

CC	Number	Kind	Date
CN	1283827	A	20010214 (Basic)

Application Data:

CC	Number	Kind	Date
*CN	2000123530	A	20000818

Abstract: A universal authentication system and method for electronic information network features use of client/server mode to ensure the network information security. It is characterised by that user accounting plus cipher for authentication, network signature and authentication, transmission of 128-bit random key(s) between users, electronic seal, high-security information sharing, and monodirectional or bidirectional authentication between two users.

SALES SYSTEM OF ENTERTAINMENT TICKET

PUB. NO.: 2003-150740 [JP 2003150740 A]
PUBLISHED: May 23, 2003 (20030523)
INVENTOR(s): ONOYAMA JIRO
APPLICANT(s): WHITE LILY KK
APPL. NO.: 2001-345697 [JP 2001345697]
FILED: November 12, 2001 (20011112)
INTL CLASS: G06F-017/60

ABSTRACT

PROBLEM TO BE SOLVED: To increase the profit of a sponsor and to reduce behaviors like 'illegal ticket-brokers' of a third party as the result of enabling a customer to select a drawing system or an **auction** system by his/her own will.

SOLUTION: In the sales system of entertainment tickets by which a server provides entertainment tickets to customer terminals by using a communication network, the server is provided with an entertainment information transmission function for transmitting the entertainment information stored in an entertainment information DB, an application procedure transmission function stored in a purchase procedure information DB and transmitting purchase information that there are selection manners of the 'drawing system' and the '**auction** system' about application for the entertainment tickets on the display screen of a customer terminal, a prize-winning probability transmission function for transmitting prize-winning probability information obtained based on a prize-winning probability **rule** with the total number of applications and the number of selling tickets as reference to applicants to participate in an **auction** place, and a prize-winning information transmitting function which performs

drawing by a drawing means to the applicants selecting the drawing system, makes a successful **bidding** by a successful **bidding** means to the participants selecting the **auction** system, and transmits information of successful **bidding** to the successful **bidding** person and the prize winner.

FILED: August 15, 2001 (20010815)
INTL CLASS: G06F-017/60 ; G06F-017/10

ABSTRACT

PROBLEM TO BE SOLVED: To provide a method, a device and a program for auction and a medium with the recorded thereon program by which the incentive compatibility is guaranteed even when not only a bid price but also the **characteristic** value of a bidder are considered.

SOLUTION: On the basis of the name of a bidder contained in received **bid** data, the **characteristic** value of each bidder is acquired from a **characteristic** storage device previously storing the **characteristic** value showing the credit or the like of the bidder (s4), the evaluation value of each bidder corresponding to an object article is respectively calculated on the basis of the **bid** price and the **characteristic** value, and the bidder of the smallest evaluation value is determined as a successful bidder of the object article (s5). When a minimum value in the evaluation values of respective bidders except for the successful bidder is equal with the evaluation value of the successful bidder, the bid price of the correspondent successful bidder is determined as an amount of reward to the successful bidder (s6).

ABSTRACT

PROBLEM TO BE SOLVED: To provide an intermediary system **characterized** in that it introduces a seller by a means of **bidding** to common consumers trying to purchase a commodity by a procedure of joint purchase on the Internet.

SOLUTION: A registered consumer identified by a registered consumer authenticating means 11 using a home page of a management center 4 as an interface posts a commodity desired to purchase by a joint purchase posting means 14, invites joint purchasers, and posts a start price. A joint purchase participation applicant browsing this ID finished in registration and participates in the joint purchase. When joint purchasers reach capacity, registered sellers identified by a registered bid seller authenticating means 13 start a bid by a bid managing means 15 and a bidding situation is posted real time on the home page of the management center 4. A seller presenting a minimum price within a specified period wins the bid, and information is sent to the registered consumer, joint purchasers and the winning seller by a joint purchase/bid matching means 16.

ABSTRACT

PROBLEM TO BE SOLVED: To solve the problem that a customer can participate in an auction to buy a commodity, however he cannot buy the commodity unless he presents the highest **bidding** price among the participants of the auction, contrary to a **behavior** buying the commodity from a shop presenting the lowest price.

SOLUTION: The customer transmits the name of the purchase desired commodity and the retrieval range of shops to an inverse auction offer server 4. When receiving a report of shops capable of participating in an inverse auction from the inverse auction offer server 4, the customer accepts the selection of shops allowed to participate in the inverse auction and reports the shops allowed to participate to the inverse auction offer server 4.

INTL CLASS: G06F-017/60

ABSTRACT

PROBLEM TO BE SOLVED: To provide a commodity selling method by an electronic commerce system, in which an exhibitor can safely carry out a transaction with a successful bidder having excellent credit information.

SOLUTION: In the commodity selling method by an electronic commerce system, a successful bidder is determined by an **auction** and a commercial transaction evaluation is carried out with respect to the transaction interested party after a transaction action between the exhibitor and the

successful bidder is completed. In the case where a bidder carries out a bid lower than the bid price of a first candidate of the commodity with respect to the commodity at an auction, the system compares the difference between the bid price of the bidder and the bid price of the first candidate and the difference between the commercial transaction evaluation of the bidder and the commercial transaction evaluation of the first candidate and determines an order at this time, in accordance with rules regarding a preference order.

ABSTRACT

PROBLEM TO BE SOLVED: To enable participants to conceal personal information including strategy, resources and further up to the ID as important matter at auction and on the market since the main defect that almost all conventional auction mechanisms have is that a seller and bidders need to rely on an auctioneer.

SOLUTION: Auction is carried out. An indication to make auction specifications showing a rule related to the auction effective is received from the auctioneer. An auction ID related to the auction specifications is generated. Bids or bid strategy connected to the auction ID is received from bidders. The received bids or bid strategy is evaluated in environment which can not be accessed by the auctioneer. The result of the auction is supplied to the bidders based upon the evaluation.

ABSTRACT

PROBLEM TO BE SOLVED: To make a price decision acquired by devising the convenience of a bidder and simultaneously considering a procuring process of a seller by performing a **bid** while adapting to the **characteristic** of an object needing a lead time.

SOLUTION: A **bid** object registering device 31 makes an object in the middle of a procuring process an auction object as a virtual stock and registers the object being a bid object in the case of making a bid for the offer of the object needing time for procurement. A various situations storage device 32 stores various situations information including the procurement proceeding situation information on the registered object and a successful bid situation information. A bid object article revealing device 33 reveals the various bid situations information online. A bid receiving device 34 receives a new bid and a change of the bid price that has already been bid even in the middle of a procuring process. A successful bidder deciding device 35 changes successful bidders and updates the various bid situations information within the range of a prescribed condition at any time.

INTL CLASS: G06F-017/60 ; G06F-019/00

ABSTRACT

PROBLEM TO BE SOLVED: To obtain electronic transaction **characterized** by that a price is determined by allowing respective companies to **bid**, on the basis of a minimum purchase amount that a consumer of the Internet presents.

SOLUTION: A consumer 1 registers 4 individual information and a password in a file 3 presented by access to a homepage of an electronic transaction running company 2. The consumer accesses the homepage of the electronic

transaction running company for password verification 6, when necessary and inputs a necessary item 9 to the presented file 8 on condition that the consumer is authenticated 7. The electronic transaction running company e-mails inputted necessary items to respective companies 10, which present bid amounts 11 to the electronic commerce running company. The presented information of the respective companies is e-mailed to the consumer and examined, and the consumer specifies an amount and its company to enter a contract.

----------------	----	--	----	-------------	--

Abstract (Basic): US 20030172022 A1

NOVELTY - An auction scope, auction interaction, auction control, auction pricing, a set of auction closing rules, and auction iteration in the data processing system are determined. An auction methodology for buyer/seller procurement process is selected, based on any of the determined result.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for program storage device for storing instructions for selecting auction methodology.

USE - For selecting automated auction methodology to be used during request for quotation (RFQ), request for proposal (RFP) or request for information (RFI) process.

ADVANTAGE - Allows suppliers the ability to essentially bid against one another as one would do in an auction setting, thereby reducing cycle times and administrative costs for the buyer, as the buyer would no longer be required to review every bid entered by the various suppliers. The supplier who out bids the various suppliers would simply be selected by the buyer. Assures the buyer that its procurement process is functionally optimal and is saving the buyer resources and money, as it results in an efficient procurement system.

DESCRIPTION OF DRAWING(S) - The figure shows a flow diagram explaining the steps involved in selecting auction methodology.

Abstract (Basic): US 20030135444 A1

NOVELTY - **Bids** received from suppliers are solicited and the **bids** are validated if the **bids** satisfy a set of **rules** . An optimal solution comprising optimal quantity and optimal unit price, is generated with the validated **bids** . The compare value is replaced with the optimal unit price, if the optimal unit price is less than the compare value.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) multiple award optimization **bidding** system;

(2) machine readable medium storing multiple award optimization **bidding** program.

USE - For multiple award optimization **bidding** in online electronic **auction** .

ADVANTAGE - Enables a buyer to choose the best optimal solution for his particular situation, to purchase lots from suppliers.

DESCRIPTION OF DRAWING(S) - The figure shows the flow diagram of the **bidding** process.

US 20030083976	A1		11	G06F-017/60	

Abstract (Basic): US 20030083976 A1

NOVELTY - The computer displays a symbol (14) for tradable, bid side (16) and offer side (26). The **bid** and offer sides include lists of montage rows comprising respective market participants, prices and routing **characters**. A routing **character** key in conjunction with a corresponding quantity key define a transaction of specific number of units of a specific tradable with specific market participants at a specific price.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for financial market information processing method.

USE - Computer for transactions of financial products such as stocks, bonds, futures.

ADVANTAGE - Provides significantly quicker order entry times when buying or selling stocks, bonds, futures and other tradable. A single routing character can be used to identify both the desired order destination and the desired transaction price, thereby eliminating the need for an additional step.

DESCRIPTION OF DRAWING(S) - The figure shows the montage window. symbol (14)

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
TW 494335	A		G06F-017/60	

Abstract (Basic): TW 494335 A

NOVELTY - The present invention provides a virtual stocking warehouse for **bid** -transfer transaction and the loaning method thereof, which is applied for a network transaction system, being **characterized** in that: the original seller can sell the good to the bidder through the **bidding** process; the goods for the **bid** will be moved and stored in the virtual stocking warehouse for the bidder

provided by the network service company; then, the goods will be passed between the virtual stocking warehouse of the trader through other bidding process to form the bid-transfer transaction. When the bidding buyer choose to send the bidding goods to a specified location or the period for the stocking of the bidding goods for the original seller is expired, the goods may be moved out from the virtual stocking warehouse of the last bidder. Thus, in the bid-transfer process for the bid-transfer buyer and the bid-transfer seller, it is only necessary to consider the prices, the amount and type of the goods, and it does not have to worry the transferring and storage problem for the bidding goods, and it can further obtain the actual zero-stocking object. Moreover, in the bid-transfer transaction, the trader can also use the loan to extend the financial leverage and increase the sale amount and the circulation speed for the goods.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
TW 486652	A		G06F-017/60	

Abstract (Basic): TW 486652 A

NOVELTY - A method for proceeding bid agent in an Internet bidding agent system is employed to accept a commitment from a user to participate the Internet bidding. The user connects to the bidding agent system through a linkage of Internet and further inputs the identification information and the bidding information such that the bidding agent system can determine a bid price and generate a next acting time according to the bidding information from the user. If the current time reaches the next acting time for the user, the system will renew the bid price according to the current number of bidders, the current price and the bidding information, and further judge whether or not to **bid** at the renewed **bid** price. The Internet **bidding** agent system in the present invention has the human-like **characteristics** and is able to hold the **bidding** interests of other bidders such that the **bidding** process can last and will not be over too earlier.

Abstract (Basic): KR 2002082325 A

NOVELTY - A method for supplying construction bidding information is provided to supply only bidding information corresponded to qualification matter of a necessary field in accordance with a classification of members registered previously by constituting a registration system and an information transmission system adapted to a qualification of a company and an individual.

DETAILED DESCRIPTION - Information is classified according to a construction **bidding**, a purchase **bidding**, and a service **bidding** adapted to a **characteristic** of on an on-line system by analyzing and recognizing **bidding** information of construction business circles. Each **bidding** classification list is classified to the lower stage until detailed area. Thus, only bidding information maximally necessary

for a business enterprise is transmitted. Construction bidding information being inputted to a DB by an operator is stored by dividing items and areas thereof into many portions, and the remainder bidding information is linked. Thus, construction-bidding information may be received and utilized rapidly, exactly, and conveniently.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
TW 484081	A		G06F-017/60	

Abstract (Basic): TW 484081 A

NOVELTY - The present invention discloses a bidding method with multiple quasi- **bidding** processes before **bidding** opening, in which the **bid** method is typically applied in an Internet transaction system. The **characteristic** of the **bidding** method lies in the adoption of two steps: multiple quasi- **bidding** processes and a final **bidding** process.

DETAILED DESCRIPTION - The multiple quasi-bidding processes are used to select part of buyers, but the unselected buyers can participate the bidding again in the next quasi-bidding process and determine their next bid prices according to the bidding information published in the previous quasi-bidding process. If no buyer participates the bidding after a predetermined number of quasi-bidding processes, then the bidding progresses to the final bidding process, and an award is made to the buyer submitting the highest bid higher than or equal to the predetermined offering price from the seller.

Abstract (Basic): US 20020161622 A1

NOVELTY - A set of bids for a product except the highest **bid** , are removed from an auction data (10). A bias in the auction data produced by a set of **characteristics** of an auction, is corrected.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for product demand estimate generation method.

USE - In marketing/sales applications for setting product prices to achieve desired sales target.

ADVANTAGE - Enables real-time detection of shifts in demands and prices.

DESCRIPTION OF DRAWING(S) - The figure shows a price analyzer.

Abstract (Basic): US 20020174052 A1

NOVELTY - A predictor predicts **bidding behavior** of bidders, based on the estimated unknown elements of market structure and **characteristics** of an auction. An optimizer generates an evaluation of

auction, using an evaluation criteria based on the estimated unknown elements of the market structure and predicted **bidding behavior** . The optimizer selects best auction design candidates from the generated auction.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for computer-implemented automated auction analysis method.

USE - For designing and analyzing auctions.

ADVANTAGE - Allows auction design decisions to be adjusted dynamically for specific situations and enhances sales promotion.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart of operation of a data selection module in the support system.

Abstract (Basic): KR 2002071350 A

NOVELTY - An auction service system and method is provided to enable an auctioneer or a bidder to select a character and to display the selected character on a desired auction space so that it makes the auctioneer or the bidder feel like a real world auction environment and activates an auction progress.

DETAILED DESCRIPTION - The method comprises steps of authenticating an accessing auctioneer(S310), displaying plural characters stored at a database for enabling the auctioneer to select one character(S315), enabling the auctioneer to register the selected character(S316), enabling the auctioneer to input detailed data on a commodity to be auctioned(S320), storing the input data and registering the commodity(S330), enabling the auctioneer to select an auction space model and display the auction space model over a web browser(S340), registering the auction space model connected to data on the commodity stored at the database(S350), authenticating an accessing bidder, enabling the bidder to select one character among the characters stored at a database, enabling the bidder to register the selected character, displaying a list of commodities to be auctioned, displaying detailed data if the bidder selects one commodity among the list, displaying a scene of the auction space model with the bidder's selected **character** if the bidder pushes an auction participation button, enabling the

bidders to offer a price, and determining a **bid** winner to offer the highest price.

KR 2002034575	A	1	G06F-017/60	

Abstract (Basic): KR 2002034575 A

NOVELTY - A system and a method for a material superiority auction in the futures transaction are provided to reduce the risk in futures transaction for a low material superiority manufacturer and purchaser by ranking the contract order depending on the quantity of outbidding.

DETAILED DESCRIPTION - The system comprises a user client(100), the Internet(200), a relay device(300), and a connecting device(400). The user client is a computer connected to the relay device via the Internet and other communication devices such as a cellular phone connected with the Internet. The connecting device is the connecting server of all guarantee insurance companies, and is constituted of a processing unit(310) and a database unit(320). The database unit consists of an operation DB(Database)(321), a user DB(322), an article DB(323), a **bid** result DB(324), a contract DB(325) and an execution DB(326). The connecting device is connected to the relay device, and a user takes out an insurance **policy** through the connecting device. The connecting device is connected with a server of an Internet web site to provide information needed for **auctions**.

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
US 20020077959	A1	15	G06F-017/60	CIP of application US 99252790

Abstract (Basic): US 20020077959 A1

NOVELTY - Line item price adjustment value is calculated corresponding to lot **bid** adjustment value. Based on the calculated adjustment value, the line item price is adjusted to minimum line item price.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Machine-readable medium storing line item price control program;
- (2) Line item aspect control method;
- (3) Computer-readable medium storing line item aspect control program; and
- (4) **Bidding** device.

USE - For controlling price of line item e.g. gear, bearing, appliance, shelf, door handle, corn syrup, sheet steel etc., in

electronic auction e.g. supplier- bidding auction .

ADVANTAGE - By using lot bid adjustment value, the barriers to entry for new potential suppliers are reduced. Thus the buyers are benefited as additional bidders increase competition, and result in better bidding dynamics.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart illustrating line item bid limit rule implementation.

Designated States (Regional): AL AT BE CH CY DE DK ES FI FR GB GR IE IT LI LT LU LV MC MK NL PT RO SE SI TR					

Abstract (Basic): WO 200243303 A2

NOVELTY - A demand set of specifications related to the commodity is received from a buyer. Each specification comprises values for the one or more **characteristics**. The demand set to one or more vendors is provided for receiving a **bid** from at least one of the vendors for one or more specifications of the demand set with storing all received bids. All stored bids are analyzed for identifying a preferred bid for each specification of the demand set.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for:

(a) a computer system for providing price discovery for a commodity having one or more characteristics
(b) a computer program product

USE - In price discovery in commercial industries where products and services involve multiple specification layers.

ADVANTAGE - Provides buying entities with a pricing and price standardization mechanism that alleviates the necessity of resorting to inferior pricing techniques, such as inexact pricing heuristics, vendor estimators employing blended average pricing, or other third-party transaction-based pricing services. Allows a buying entity to unbundle its price discovery process from its transaction execution process. A buying entity can exploit the advantages inherent in sophisticated

competitive bidding environments, such as the tendency of these environments to yield the most attractive prices available to any given buying entity in the marketplace particularly in comparison to inexact pricing heuristics, vendor estimators or third-party transaction based pricing services.

DESCRIPTION OF DRAWING(S) - The drawing is a flowchart illustrating the use of an embodiment of the present invention to create a PRIVATE RATE CARD.

Abstract (Basic): US 20020032634 A1

NOVELTY - A list of items being **auctioned** among group of members having similar information sources, interests, **characteristics** and pre-existing relationships is accessed. A request including one of the items and **bidding** price is generated from a member. The member receives a response from the owner of one of the items, corresponding to generated request.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for online **auction** platform providing system.

USE - For providing online live **auction** platform in distributed virtual network such as Internet, wireless networks such as GSM, CDMA, TDMA, PHS wireless networks applied to any **auction** environment, where communities of members are merged using relationships with other members.

ADVANTAGE - Members of the linked communities are in control of the **rules** and conditions governing interactions in the linked **auction** communities. Community information can be segregated into public and non-public storage areas with item level control of the information. **Auction** items have high affinity with the background of the possible bidders so that **auction** items are more appreciated. Emphasizes more on person-to-person interaction in the online actions and hence eliminates need for middle broker.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of networked communication system for implementing online **auction** platform providing method.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
KR 2001114043	A		1 G06F-017/60	

Abstract (Basic): KR 2001114043 A

NOVELTY - An online used car bidding method is provided to reduce time waste according to a graphic transmission by providing a detailed text information on a used car excluding its graphic information, and to enable a user to participate in a bid regardless of time and space by providing the user with the information on a used car rapidly using e-mails as well as a wireless character transmission service.

DETAILED DESCRIPTION - A user online accesses to Internet(S1), logs on to an intermediation site(S3), and then inputs information on a car to be sold by the user as a text information(S4). The intermediation site processes the inputted information(S5) and transmits the processed information to bid participants(S6). Each of the bid participants receives the information and transmits bid details according to an intention to bid based on the received information(S7). The intermediation site compares and analyzes all of the received bid details(S8) and notifies a bidder and a seller of the bid results(S9).

AU 200220124 A G06F-000/00 Based on patent WO 200241112

Abstract (Basic): WO 200241112 A2

NOVELTY - Method for providing profile-based pricing in an online **auction** , includes: retrieving a set of **rules** governing online **auction** from a **rules** database, the **rules** includes a **rule** involving a profile field; accessing profiles for initiator and for each of the bidders from a profile database, each of the profiles has profile fields; gathering information regarding initiator or bidders with regard to profile fields in the profiles by using an information collection unit; dynamically updating profile fields in the profiles by using information gathered from the information collection unit and combining it with **rules** from the set of **rules** governing the online **auction** .

DETAILED DESCRIPTION - INDEPENDENT CLAIM included for the following: method for determining which of the potential bidders may be allowed to participate; method for providing multi-variable online **auction** ; apparatus for providing profile-based pricing; apparatus for determining which of the potential bidders may be allowed to participate; apparatus for providing multi-variable online **auction** ; program storage device

USE - For Internet **auctions** .

ADVANTAGE - Dynamically updates profiles for an initiator and bidders in an online **auction** allows pricing or other **auction** variables to be altered during or after an **auction** to be adjusted based on information gathered with regard to profile fields in the profiles. Additionally, limits can be dynamically set as to who can participate in an **auction** using the information in the profiles. Multi-variable **bidding** maybe accomplished by applying weights to certain variables at the end of an **auction** along with any modifications outlined in any relevant profile fields in order to determine a winner or winners of the **auction** .

DESCRIPTION OF DRAWING(S) - The diagram shows a web-based **auction** system

AU 200149209 A G06F-000/00 Based on patent WO 200171453

Abstract (Basic): WO 200171453 A2

NOVELTY - Method for **bidding** on multiple **auctions** allows a user to define various models for **bidding** at multiple **auctions**. The **bidding** system then **automatically** places **bids** on behalf of the user. The **bidding** rules may specify to win at most one of multiple **auctions** at the lowest price or to **bid** at an **auction** only if successful at **bidding** at another **auction**.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following: method in a computer system for inputting multiple **auction bidding** requirements; computer system; computer-readable medium

USE - For the Internet.

ADVANTAGE - Allows a bidder to direct **automatic bidding** at multiple **auctions** in accordance with **bidding** techniques that are specified by the bidder. To direct the **automatic bidding**, the **bidding** system allows the bidder to specify the **auctions** at which the **bids** may be placed. The **bidding** system also allows the bidder to specify the **bidding** technique that should be used when **bidding** at the specified **auctions** on the bidder's behalf. For example, one **bidding** technique may be to evaluate **auctions** for similar items and to place a **bid** at the **auction** with the lowest current **bid** whenever the last **bid** is outbid.

DESCRIPTION OF DRAWING(S) - The diagram shows the components of multiple **auction** system

server engine (04)

auction component (05)

KR 2001025278	A	1	G06F-017/6003	

Abstract (Basic): KR 2001025278 A

NOVELTY - A reward program and its execution method is provided to reward a set ratio of a profit obtained from an **auction** and an electronic commerce, and integrate the reward management of the profit, the recommender and the purchase over the Internet.

DETAILED DESCRIPTION - The method comprises steps of enabling the users to choose one between a pay member or a free member when the users subscribe for the service site, rewarding the purchase of the member when the member buys a commodity by cash, rewarding the successful **bidding** when the member wins the **bidding** in the **auction**, and distributing a set ratio of the profit made in operating the service site, for example an electronic commerce or an **auction**, to the pay members. In the method, the member information are separately stored in the pay member management database and the free member management database. The reward **policy** is a kind of a multiple stage marketing method so it can increase the number of the members and the revenue of the service site.

Abstract (Basic): KR 2001085069 A

NOVELTY - An online character auction method is provided to enable a user to receive an account from an online game provider, to generate a character on the account, to grow the character via an online game, and to transact the grown game with others over the network.

DETAILED DESCRIPTION - The method comprises the steps of enabling an online game member to register a character on an auction site, generating a list record with a current owner, a game provider, an ID and a password, and generating a state check record for checking a possibility to be listed on an auction market(204-212), updating the list record and listing the **character** in the case that it is possible to list the **character**, enabling users to make a **bid** on the **character** at a price more than a current price(232-241), selecting a user offering the highest **bid** price for the **character**, enabling the successful bidder to pay for the **character** within the time set, and transferring an ownership of the character to the successful bidder while depositing the payment money at a cyber account of the character seller.

Abstract (Basic): KR 2001079007 A

NOVELTY - A device for developing intermediate service system of a building and a re- **bid** method are provided to show a cyber **character**, a delicate design, a price, a warranty deed, and a shape after a completion of a construction in advance at a low price and rapidly when a construction is received or ordered at on-line.

DETAILED DESCRIPTION - A user inputs one's credit number and resident registration number, address, name, one's property state etc. in a client member registration page view for joining to a membership of a homepage before a bid registration. If the user inputs and clicks a new construction remodeling, a renovation, an interior, and total sample of a building in a client demanding space using a sample inherent number, the system shows the related sample and an inherent number in a site view. If the user clicks model inherent numbers according to samples in order, moving pictures are shown. If the user

inputs a standard sample and confirms an inherent number, an area amount, a height, a material, a color, a design, and construction expenses of wanted construction field, the site transmits a detail drawing, specifications, an estimate to the client through an E-mail.

Abstract (Basic): WO 200179961 A2

NOVELTY - System scans database with plural travel itineraries, step 102, determines itineraries which can be grouped together, step 104 and presents group to various suppliers, step 106. If supplier wants to book group, **bid** is placed, step 108 and system determines optimal **bid**, step 110, meeting criteria set out in **rules** associated with itineraries, before optimum acceptable **bid** is selected and each itinerary is booked by winning supplier, step 112.

DETAILED DESCRIPTION - AN INDEPENDENT CLAIM is included for apparatus for conducting an **auction**.

USE - Conducting a reverse **auction** using an interactive demand management system.

ADVANTAGE - Aggregation of demands in certain fields.

DESCRIPTION OF DRAWING(S) - The drawing is a flow chart of the operation.

Abstract (Basic): WO 200188806 A1

NOVELTY - Innovators (11), special interest groups (12),
constituents (13), politicians (14) and government enterprises (15)
interface through a public **policy auction** system (20) over the
Internet (30), while the public (10) may also access the system. The
purpose of the **auction** is to replicate competitive forces and
incentives between buyers and sellers and includes penalties to force
combination and pooling of **bids**.

DETAILED DESCRIPTION - AN INDEPENDENT CLAIM is included for a
method for providing an incentive for development and legislative
adaptation of new efficient public **policies**.

USE - Promotion of innovations to efficient public **policies**.

ADVANTAGE - Replicating competitive forces and incentives between
buyers and sellers.

DESCRIPTION OF DRAWING(S) - The drawing shows the system

DE 10114188	A1		12	G06F-017/60	
JP 2001357252	A		13	G06F-017/60	

Abstract (Basic): DE 10114188 A1

NOVELTY - The method involves receiving instructions from an **auctioneer** to enable an **auction** specification that provides **rules** for the **auction** . An **auction** identifier is produced that is connected to the **auction** specification. A number of **bids** or **bid** strategies are received that are connected to the **auction** identifier. The received **bids** or **bid** strategies are evaluated in an environment that is not accessible by the **auctioneer** . An **auction** result is provided to the bidders based on the evaluation.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for a secure **auction** market, a method of executing an **auction** , a product including a computer-usable medium, a machine-readable program storage unit, and a computer program product.

USE - Eg. For electronic **auctioning** of oil fields, property, art etc.

ADVANTAGE - Secure.

DESCRIPTION OF DRAWING(S) - The drawing is a block diagram representing the method.

Abstract (Basic): WO 200175756 A1

NOVELTY - Moderating computer receives **bids** and transmits them to other energy suppliers who can adjust **bids** depending on whether they wish to encourage or discourage additional energy supply to particular geographic area.

DETAILED DESCRIPTION - Method consists in formulating a request for energy supply delivery at a future time and transmitting it to a moderating computer which sends the request to energy providers. These send a response with economic incentive data to the computer which then sends the relevant incentive or derivative data to buyers and providers using decision **rules**. The buyer transmits the request by entering the data into a software defined template and the computer posts processed requests on a computer bulletin board. The provider responds to requests by entering data in a second software defined template There are INDEPENDENT CLAIMS for (1) a **bidding** moderator for an automated **auction**, (2) a method of billing a buyer for energy used, (3) a method

of managing energy provision.

USE - **Auction** is for providing energy supplies such as electrical power and natural gas.

DESCRIPTION OF DRAWING(S) - The figure shows shared data links between different entities in the system.

Abstract (Basic): WO 200144994 A2

NOVELTY - A group of customers e.g. seller and shipping agent, offer to provide a product or service. Customers bid for offered product or service over Internet. Winning bids selected and it is arranged that product or service is provided to winning bidders

DETAILED DESCRIPTION - The members of the group may be chosen from a list including: seller, insurer, shipper, inspector, financier, and escrow agent. The offer presented may include terms dependent on a **bid** received. The terms of offer may depend on a **characteristic** or preference of a bidder. AN INDEPENDENT CLAIM is made for:

(a) Stored computer software to implement described method.

(b) A system for facilitating transactions;

(c) An apparatus for facilitating transactions;

(d) A server running a program for a web-based service for buyers to enter into national and international transactions.

USE - As a method of implementing international trade using the Internet

ADVANTAGE - Provides an efficient way of enabling and coordinating interactions between trading parties.

AU 200138272 A G06F-017/60 Based on patent WO 200169485

Abstract (Basic): WO 200169485 A1

NOVELTY - An user is allowed to create a user definable business process by accepting definition instructions including **rules**, roles to be taken by system users and data fields containing information for a business process from the user. The accessibility of certain information within the data fields is a function of time and system authority.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- Method for defining an interactive business process;
- Apparatus for defining an interactive business process;
- Method for performing a business process;
- System for performing a business process;
- Method for automating communication between business users;
- Apparatus for automating communication between business users;
- Method for conducting interactive business processes;
- Method for evaluating a school admission application;

(i) Method for processing a purchase order;

(j) Method for delivering a product

USE - For conducting interactive business-to-consumer, consumer-to-business, business-to-business and/or person-to-person business processing and communications used in transportation industry processes such as airline ticket reservations, shipping, forwarding, trucking or delivery, in financial industry processes such as on-line banking, lending and borrowing, security exchange, mortgages, or accounting, in educational industry processes such as school admission, grant applications, project management and monitoring, on-line conferencing, homework assignments for school or on-line examinations, in procurement industry processes such as **bidding**, buying, selling or **auctioning** of goods, in retail and service industries processes such as on-line shopping, reservations and confirmation for car rentals, hotels or restaurants, in medical, pharmaceutical and health care industries processes such as clinic visit scheduling or on-line medical expert consulting, in insurance industry processes such as application and approval for insurance and advertising industry.

ADVANTAGE - The distribution of information to various parties to business processes, is automated. A detailed business process is carried out in a structured approach in which various users of the process are kept apprised of the status of the process.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of a central computer system.

AU 200129428 A G06F-017/60 Based on patent WO 200155929

Abstract (Basic): WO 200155929 A1

NOVELTY - At timed intervals, e.g. each quarter day (200), **bids** are checked (208) for all bidders (202) and search engines (204) to determine which **bid** value is highest. **Bids** may be decremented/incremented within user specified limits, the checking and incrementing steps may be executed a number of times (216,222,224) to achieve desired positions.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a vendor inventory control system.

USE - For use in on-line **auctions** to determine relative priority

for a service, e.g. **bidding** for Internet search engine key-phrases where the advertiser with the highest **bid** for a given key-phrase appears first in the list, the second appears second, etc..

ADVANTAGE - The ability to check priorities at specified time intervals and to increment **bids** , provides a system that regularly monitors current rankings and can adjust **bids** according specified **rules** .

DESCRIPTION OF DRAWING(S) - The figure is a flow diagram illustrating a method of on-line **bid** management.

Designated States (Regional): AL AT BE CH CY DE DK ES FI FR GB GR IE IT LI LT LU LV MC MK NL PT RO SE SI

Abstract (Basic): WO 200122321 A2

NOVELTY - An **auction** server (204) provides web pages to and receives input from a client web browser (202) and can maintain an **auction** database (210) of items available for **bidding** . The start **auction** process continually monitors an **auction** table of the database and denomination maintenance functions are performed by back-end services (208) also providing product category functions.

DETAILED DESCRIPTION - An incentive reward system (206) implements **rules** of incentive rewards and a participant supplies personal details and then goes to the **auction** page showing **bid** items, time remaining

and the current **bid** , while the **auction** server calculates conversions between different media types and currencies.

INDEPENDENT CLAIMS are included for methods for displaying **auction bid** data and for updating **auction bid** data and for a computer readable medium with instructions.

USE - Computerized **auction bidding** using different purchase media.

ADVANTAGE - Providing **auction** services using multiple media types.

DESCRIPTION OF DRAWING(S) - The drawing is a diagram illustrating the system

Auction server (204)
Web browser (202)
Auction database (210)
Back-end services (208)
Reward system (206)

Abstract (Basic): CN 1283827 A

NOVELTY - A universal authentication system and method for electronic information network features use of client/server mode to ensure the network information security. It is **characterised** by that user accounting plus cipher for authentication, network signature and authentication, transmission of 128- **bid** random key(s) between users, electronic seal, high-security information sharing, and monodirectional orbidirectional authentication between two users.

Designated States (Regional): AL AT BE CH CY DE DK ES FI FR GB GR IE IT
LI LT LU LV MC MK NL PT RO SE SI

Abstract (Basic): EP 1054336 A2

NOVELTY - Oil shipped into different locations or licensing rights to perform an activity a different locations or securities having different durations or goods with slightly different characteristics making them only imperfect substitutes may be **auctioned** by computer using **rules** established for the purpose. Goods are sold to a bidder if there is only one **bid** for the item in question and the computer may continue the **bidding** rounds until each item to be **auctioned** has received only a single **bid** in a given **auction** round.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for a computer implementing an **auction** process.

USE - Conducting **auctions** .

ADVANTAGE - The **auction** is conducted efficiently because the **rules** avoid problems such as all identical items selling at a uniform price reached at the end of the **auction** and bidders engaging in demand reduction to manipulate prices.

AU 200012044	A		G06F-017/60	Based on patent WO 200041108
--------------	---	--	-------------	------------------------------

Abstract (Basic): WO 200041108 A1

NOVELTY - The product for **bidding** is identified and the **bid** for product is received from a bidder, during **auction** session. When the **bid** from bidder is greater than that of remaining **bids** , it is determined whether the bidder is qualified to receive a reward, based on the reward **rule** . If the bidder is qualified, an indication is transmitted to the bidder.

DETAILED DESCRIPTION - The reward includes value of currency, supplement to bit, rebate on the product, amount of frequent flier miles, secondary product, service and warranty for the product, etc.

INDEPENDENT CLAIMS are also included for the following:

- (a) method of providing penalty to bidder;
- (b) method of participation in **auction** session;
- (c) apparatus for rewarding bidder;
- (d) apparatus for providing penalty to bidder;
- (e) program product

USE - For rewarding bidder in on line **auction** environment during sale of luxury items, antiques or high ticket items via LAN; WAN, internet, intranet, public telephone exchange system, etc.

ADVANTAGE - Encourages competitive **bidding** and discourages unreasonable bit submission by providing reward or penalty to bidder.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart illustrating the steps performed by **auction** server.

pp; 46 DwgNo 9/10

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
US 6058379	A	17	G06F-017/60	

Abstract (Basic): US 6058379 A

NOVELTY - The commodity for exchange is identified by the seller and a mode of operation for exchanger is specified. A purchaser accesses the network based exchange. An exchange processor processes information comprising a negotiation between seller and purchaser, generated by purchaser. The negotiation between seller and purchaser is concluded and concluded negotiation is cleared by exchange processors.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for computer system.

USE - For goods transaction such as monetary exchanges, stock markets, supermarkets, gas stations, flea market, swap meets, etc via Internet and WWW.

ADVANTAGE - Enables a seller to intervene at any time during exchange process. As filtering of bid information is provided, compliance with predetermined criteria, is enabled and unnecessary use of system resources is avoided. Enables classification and categorization of items to be exchanged to enable various search techniques and facilitates location of items of interest. Provides improved graphical presentation of exchange information such as current and past **bid** information. Provides advanced client side functionalities and capabilities including artificial intelligence and agents style **behavior**.

DESCRIPTION OF DRAWING(S) - The figure shows the exchange and bidding processes.

Abstract (Basic): WO 200017797 A1

NOVELTY - The closing time of primary lot is extended by an incremental amount of time, upon the occurrence of specific lot

extension criterion related to the received **bids** . The closing time of secondary lot is extended when the closing time of primary lot precedes the closing time of secondary lot by less than specific time interval.

DETAILED DESCRIPTION - Initially, primary and secondary lots having at least one product defined at least on part by a buyer are offered to several potential sellers. Then, closing time for primary and secondary lots is defined, such that the **bids** for respective lots are to be submitted by the potential sells before the corresponding closing times. The closing time for secondary lot is being later than that for primary lot by preset time interval. INDEPENDENT CLAIMS are also included for the following:

(a) **bidding** method in **auction** between buyer and potential sellers;

(b) program for conducting online **bidding** electronic **auctions**

USE - For conducting online **bidding** electronic **auctions** for industrial purchasers and also between buyer and several potential sellers.

ADVANTAGE - Enables flexible dynamic alterations of market closing times, line item decision **rules** , **auction** pause, bidder-specific **bid** limits and to detect and prevent erroneous **bids** . The amount of overtime added each time to relevant new **bid** can be adjusted to suit the complexity and size of the market lots involved in the **bidding** event, thereby permitting bidders to have more overtime respond to each new **bid** when the commodity complexity or market lot size require additional **bid** calculation time.

DESCRIPTION OF DRAWING(S) - The figure shows the schematic illustration of elements and entities involved in the **auction** process.

pp; 69 DwgNo 1/15

Abstract (Basic): US 6006194 A

NOVELTY - Computer software identifies several client computers.

Bode Akintola13-May-04

Several tokens are issued to each client computer. The software transfers control of tokens from a served computer to a serving computer for performing services. The client computers **bid** their tokens for possible preferences of an **auction** to establish a winning. All tokens **bid** in the **auction** are recycled to the respective client computers.

USE - For digital processing system.

ADVANTAGE - After the **bidding** term, the tokens are recycled back to the respective client computers, so the client computers are always assured of not permanently losing their franchises that are associated with their respective commissions.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart for allocating services and resources.

Abstract (Basic): US 5978776 A

NOVELTY - Computer terminals (12a-12f) are linked through a processor (14). The vehicular characteristic data are input to terminal (12a) and processor makes data to display on terminals (12b-12d). Vehicular financial data is input to terminal (12b), an alarm alerts the operator that vehicular characteristics data are input. The processor makes the financial data to display on terminal (12a).

DETAILED DESCRIPTION - The **characteristic** data of vehicle includes the model, make year of vehicle while the financial data include the **bid** price amount, an assessment price amount, a wholesale price amount and retail price amount. An INDEPENDENT CLAIM is also included for vehicular data exchange method.

USE - For automobile sales industries.

ADVANTAGE - The vehicular data exchange system enables the dealer and customer to rapidly and conveniently acquiring information regarding the vehicles and hence minimizes the need for automobile wholesalers. As the data display on selected terminals, the system eliminates the improper usage of time and resources.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic diagram of

vehicle data exchange system.

Abstract (Basic): US 5974398 A

NOVELTY - The computed bid values related to retained advertiser, are transmitted from network to user. The selected bid value corresponding to selected advertiser is received from user and advertising message related to selected advertiser is transmitted from network to user, for display. A reward corresponding to selected bid value is offered to user, based on the selected advertiser.

DETAILED DESCRIPTION - The advertiser's maximum and minimum bids for absentee bidding, are received at the network side. The user profile and two user characteristic specifications associated with respective advertiser, on the network are accessed. The user characteristics from the user profile is compared with that from advertiser specification. If one of two selected advertisers has a maximum bid less than the first highest maximum bid, the corresponding advertiser is dropped from bidding. If the selected advertiser has a maximum bid greater than the second highest minimum bid, then the corresponding advertiser is retained in the bidding. An INDEPENDENT CLAIM is also included for advertisement information access management system in internet.

USE - For access management of advertisement information for online, interactive information and entertainment services in network such as internet, telephone, cable television, direct television, satellite communication and radio frequency communication networks, and also for tennis bulletin board.

ADVANTAGE - The database uses customer interest profiles and online service usage data to identify particular user characteristic to advertisers. The advertiser can also interact directly with the online service platform, for e.g. by interacting with a human representative of the online service, or automatically using conventional automated response platforms. Enables usage of conventional procedures for storing and retrieving from databases. The value of the offer or bid

auctioned to the user can be established based on the user's income or age.

DESCRIPTION OF DRAWING(S) - The figure shows the online advertising service in internet.

Abstract (Basic): CN 1198556 A

The system includes a computer, interface control card, preemptive answer back unit control circuit and matrix scanning preemptive answer back unit. The interface control card is formed from bus buffer circuit, decoding circuit, line scanning control circuit and interface. The preemptive answer back unit control circuit is formed from line scanning driving circuit, column signal input circuit and interface. The matrix scanning preemptive answer back unit is formed from m line signal lines, n column signal lines and m x m preemptive answer switches.

USE - The cluster group type preemptive answering electronic system for **auctions**.

ADVANTAGE - The invented system can simultaneously monitor several ten or up to a hundred preemptive answer back units, and can instantly and accurately judge valid **bid** or **rules**-broken invalid **bid**, and these can be displayed on TV or/and large screen.

------------	---	--	-------------	----------------------------

US 5920849	A		G06F-017/50	
------------	---	--	-------------	--

Abstract (Basic): WO 9834178 A

The method involves entering into the processor at least one characteristic of a first item on the drawing. At least one characteristic of a second item on the drawing is entered into the processor. The processor selects a fitting which connects the first and the second items based on the entered characteristics. A bid amount based at least in part on the cost of the first item, the second item, and the fitting is produced. The entering steps involves entering the cross sectional size and moving the entry device near to the first and the second items to transfer to the processor the length of the items or the area of the items. The information is transferring from the drawings to the processor relating to the positions of the two items relative to each other.

ADVANTAGE - Reduces time and effort required by contractor to produce bid.

Abstract (Basic): EP 407026 A

The system is a distributed one for matching bids from potential buyers with offers from potential sellers in such a way that their requirements are met and they are anonymous until the transaction is completed. There are controllable subsets of a distributable system trading book which are selectively provided to key stations from the host computer.

Alternatively there is a central system for controlled masking of the available trading market. It comprises a host computer for maintaining a host book data base which holds all the active bids and offers in the system, and key stations for making bids and offers for clients.

ADVANTAGE - System allows **automatic** matching of **bids** and offers with anonymity.

Abstract (Basic): EP 399850 A

Matching system has host computer (20) for anonymously matching active bids and offers in the system, transaction originating key station (24a), a counterparty key station (26b) and a network for connecting these elements.

Both the transaction originating key station (24a) and the counterparty key station (26b) for the potential matching transaction each have a counterparty credit limit with the system (20) blocking completion of potential matching transaction when value is in excess of counterparty credit limit. Credit limits may be conveyed by users (24a, 26b).

USE/ADVANTAGE - Systems where real time prices are subject to real time credit in determining quantity of permissible match.
